Education

Universidade Federal de Itajubá (UNIFEI)

Bachelor's Degree in Computer Science

2022–Present

Currently enrolled. Academic focus on Algorithms, Data Structures, and Software Engineering.

Experience

Open Source Development – Modding & Tools

Independent Project (Nexus Mods)

2023–Present:

- Designed and implemented complete game systems in a proprietary engine, including subclasses with custom mechanics, status stack systems, and event-driven progression logic via declarative scripting via Lua.
- Maintained cross-version compatibility without access to source code, requiring reading and analysis of proprietary data structures and continuous adaptation of code to software updates.
- Built an integrated 3D asset pipeline from scratch (Blender + Substance Painter), automating export and data injection steps, reducing iteration time by 70%.
- Impact:** Portfolio with over 90,000 unique downloads and a 97% approval rating based on direct community feedback.

Web Development & Systems Architecture

Nomini – Awards Prediction Platform

Nov 2025:

- Distributed architecture with full separation between Client (React SPA with TypeScript, Vite, and Tailwind) and Server (Node.js API with Express 5), in independent repositories.
- Role-based access control with separate JWT middleware for users and administrators, with automatic vote locking upon reaching the event date.
- Weighted scoring system for the leaderboard, calculating user accuracy with distinct weights per category.
- Axios interceptors for automatic injection of the `Authorization` header and handling of 401 responses with token cleanup and redirection.
- Database modeling with Prisma ORM on PostgreSQL (Neon), supporting many-to-many relationships between users, categories, candidates, and votes.

D&D Card Creator – Tabletop Item Card Generator

2025:

- Browser-based card generator built with React, TypeScript, Vite, and Tailwind CSS v4, featuring a live side-by-side preview and one-click PNG export via the Canvas API.
- Supports multiple visual themes and fully customizable item stats, flavor text, and ability descriptions, targeting D&D 5e and other tabletop RPGs.
- Deployed as a static site via GitHub Actions to GitHub Pages with automated CI on every push.

SizeChecker – Firefox Browser Extension

2025:

- Firefox MV3 extension (JavaScript/CSS) that scans, parses, and highlights garment inseam sizes directly on e-commerce listing and search pages, with a floating interactive dashboard for setting target inseam and tolerance range.
- Implemented a WAF and bot-bypass strategy using a hidden iframe crawler that runs same-origin within the active browser session, inheriting login cookies and executing page scripts to enable programmatic scraping of dynamically rendered size guide modals.
- Smart unit detection system with word-boundary checking to prevent double-conversion bugs between inch and centimeter values, including disambiguation from substring collisions in Portuguese text.
- Real-time diagnostics panel exposing request traces, extraction statuses, and scan statistics for debugging.

Formulinho – Formula 1 Historical Analysis

2024:

- Full-stack platform integrating React and Express.js for processing and visualizing large volumes of historical data via the Ergast API (73 years of F1 data).

- Security architecture with JWT authentication and credential encryption via bcrypt hashing.
- Modeling and management of a relational PostgreSQL database for persistence of profiles and custom preferences.
- Service layers for normalizing external data, ensuring a consistent and high-performance interface.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, Java, C#, SQL, Lua, C++ (reading)

Infra & DevOps: Docker, Linux Administration (Bash), Git / GitHub Actions, CI/CD, Postman, Vercel / Netlify.

Full-Stack Development:

- **Frontend:** React.js (Vite), Angular, Vue.js 3, TypeScript, Tailwind CSS, React Router, Axios, Sass/SCSS, Responsive Design.
- **Backend:** Node.js (Express), REST APIs, JWT Authentication, Role-Based Access Control, Security Middleware.
- **Data:** PostgreSQL (Neon), Prisma ORM, Relational Modeling, JSON/XML, Persistence Layers.

Systems & Low-level: Proprietary data structure analysis, Pipeline Automation (Blender/Substance Painter), Game system scripting (Osiris, Lua), Data Structures, Distributed Systems Logic.

Languages: Portuguese (native), English (professional proficiency).

Soft Skills

Analytical thinking · Attention to detail · Fast learner · Teamwork · Proactive communication
